

Parallels RAS for Healthcare

The Best VDI Solution

“With the implementation of Parallels® Remote Application Server, we solved the performance and connectivity problems on our network and server, improving the user experience significantly.”

Hector Ayala – Behavioral Health and Recovery Services, Stanislaus County

WORK ON-THE-GO

Our technology allows medical staff to roam and continue working from any location. No need to restart sessions or reconfigure printers and scanners.

USE ANY DEVICE

On-demand access to medical records and workflow is critical for quick decisions. Access patient information from a secure website using any device (PC, Mac, tablet, and more).

CONSTANT ACCESS

Medical IT infrastructures should have failover and High Availability. With that in mind, Parallels RAS provides uninterrupted application and desktop access in case of a data center failure and power loss.

DATA SECURITY

Parallels RAS reinforces data protection with high encryption, two-factor authentication, smart cards, advanced filtering, and customized policies. With these features, adhering to compliance mandates such as HIPAA and PCI-DSS is straightforward.

EASY ACCESS TO EXTERNAL PROVIDERS

Parallels RAS provides easy access for Pharmacies, third-party clinics, and other HIPPA-authorized resources accessing patient database remotely. Their access can be restricted using HTML5 access, which does not require software installation.

QUICK UPGRADES

Parallels RAS simplifies how EHRs, EMRs, and accounting software are maintained and installed. Updates and upgrades are done faster without having to manually install software on every device. Also, documents are stored in a centralized location, optimizing search, and backups.
